Project Map

SALINAS RIVER, ATASCADERO SEC. 205
ATASCADERO, CALIFORNIA

CONGRESSIONAL DISTRICT: 22nd District, Rep. Lois Capps

STUDY DESCRIPTION: Winter storms of the past four years have created moderate to severe damage to many of the local streams near the City of Atascadero. In particular, two Atascadero Mutual Water Company (AMWC) municipal water wells located along the Salinas River have been closed due to bank erosion. The 1995 Salinas River flood caused severe erosion along the levee and stream bank upstream of AMWC well numbers 5 and 5A, including the complete failure of approximately 700 feet of the west riverbank near Sycamore Road. Additional erosion to the remaining levee and stream bank continued with large river flows in 1996.

FISCAL YEAR 02 BUDGET: \$0

SOLUTION: Replacement of levee and use of larger rock for bank protection.

PRESENT STATUS: Project has been suspended pending statement of local desire to restart.

FUTURE EFFORTS: To be determined.
